## Introduction:

There are two different patterns when using this app, GUI and command line. When click the "Run" button in Eclipse, the GUI will display, after close the GUI window, the command line pattern will be operated. (You need close the open window rather than click "Exit" button on GUI window).

In general, this app consists of 6 main classes, includes "GUI", "MiniNet", "Driver", "InformationDB", "Account", "Run". Besides, there are 1 interface which is "Method", and 8 Exception class.

This app designed by using Eclipse as IDE, and run on the Windows environment. We also use JDK 8, JavaFx, HSQLDB.

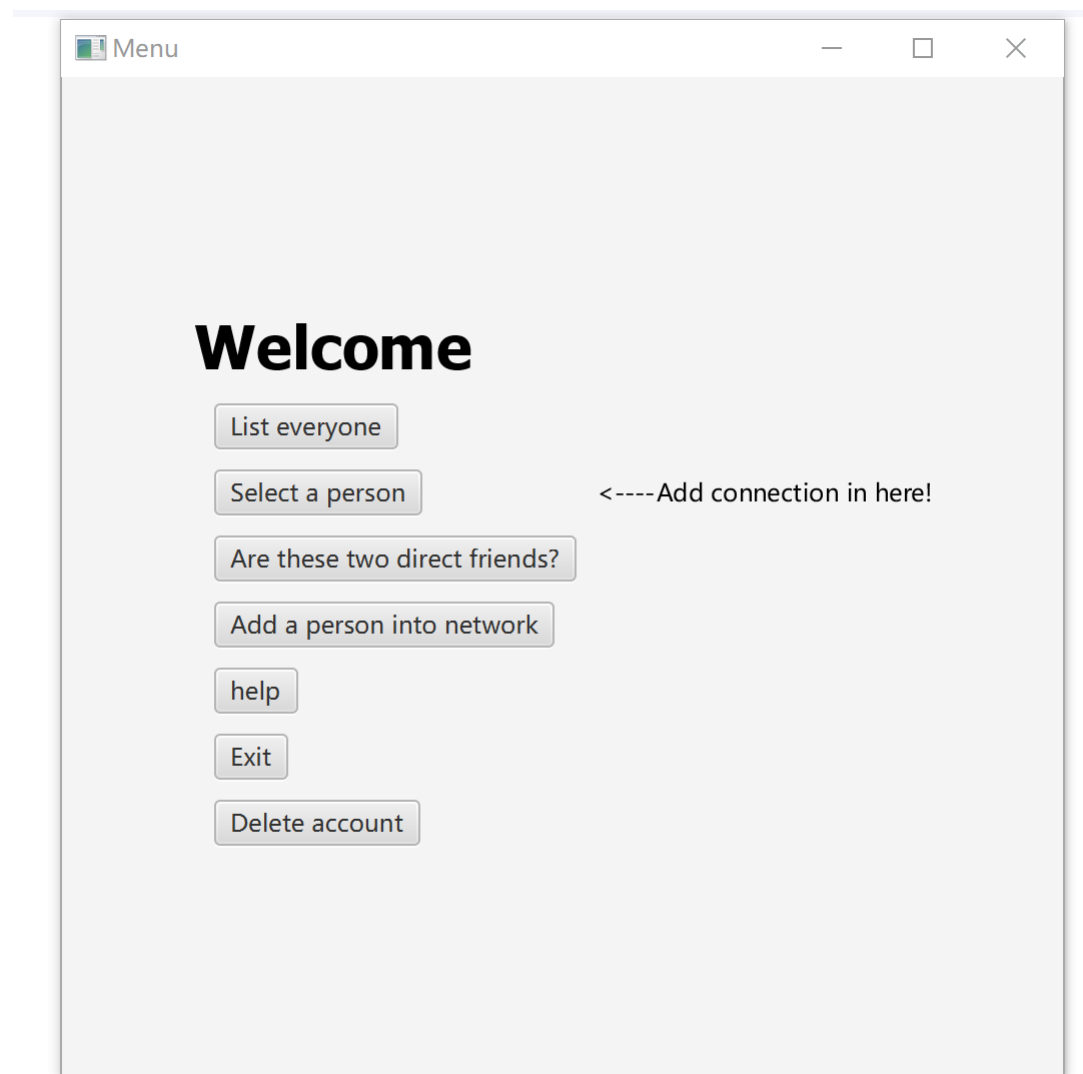

(when you run this app, if there are HSQL exception as "HSQL eclipse java.net.BindException: Address already in use", which means this process is busy, please reboot your IED, then run it again)

# How to use?

1. click “run” button on Eclipse

2. This is the Menu page

There are several functions, make your choice. And In the second line there is a hint as “add connection in here!”, if you want to add

friends, couple, child, parents and so on, you need click “select a person” button first, and a new window will be opened.

### 3. help

Click “help” in the menu page, you will find useful information.

you need choose an option,you can select or add person  
you need create account in different name

### 4. Use command line rather than GUI

If you don't want to use GUI, you need close GUI window first.

Click “X” on window rather than “Exit” button.!!

If you click “Exit”, the whole app will be shut down.!!

### 5. Now, you can use it as command line pattern

```
=====
MiniNet Menu
=====

1.List everyone
2.Select a person
3.Are these two direct friends?
4.Add a person into network
5.help
6.Exit
0.Delete account

Enter an option:__
```

## Scenarios:

When you run this app, the app will initial information, which means there are some people and relations in the system.

All account (person) information will be stored in the “people.txt” file, “relations.txt” file as well as database (HsqlDB), you can check it by click “search” button.

### How we design this app?

The app will root from “MiniNet” class, because of main method. “GUI” class is responsible for GUI design and display, “Driver” class are mainly used for display menu as command line pattern; “Run” class can patch many methods from other class, mainly from “Account” class; “Account” class store account information, and it implements the interface of “Method”. “GUI” class and “Driver” class need interact with “InformationDB” class, “MiniNet” class will link with “GUI” and “Driver” class. (more details displayed in the last page as class diagram)

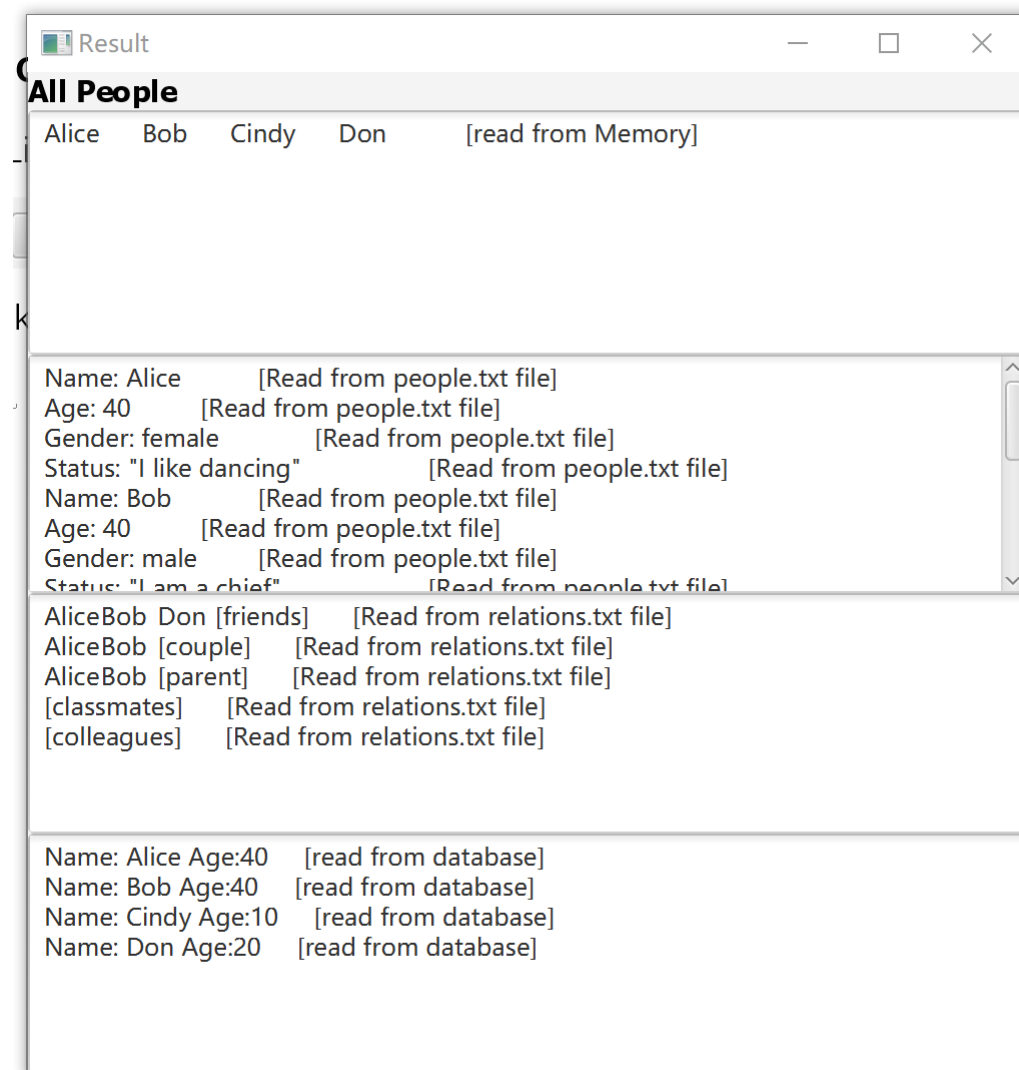

# Choice and Result:

## 1. List people

Click this button, and all of people's information will be displayed.

As:

There are 4 areas, the first area shows info stored in the memory;

The second and third area shows info stored in the file.

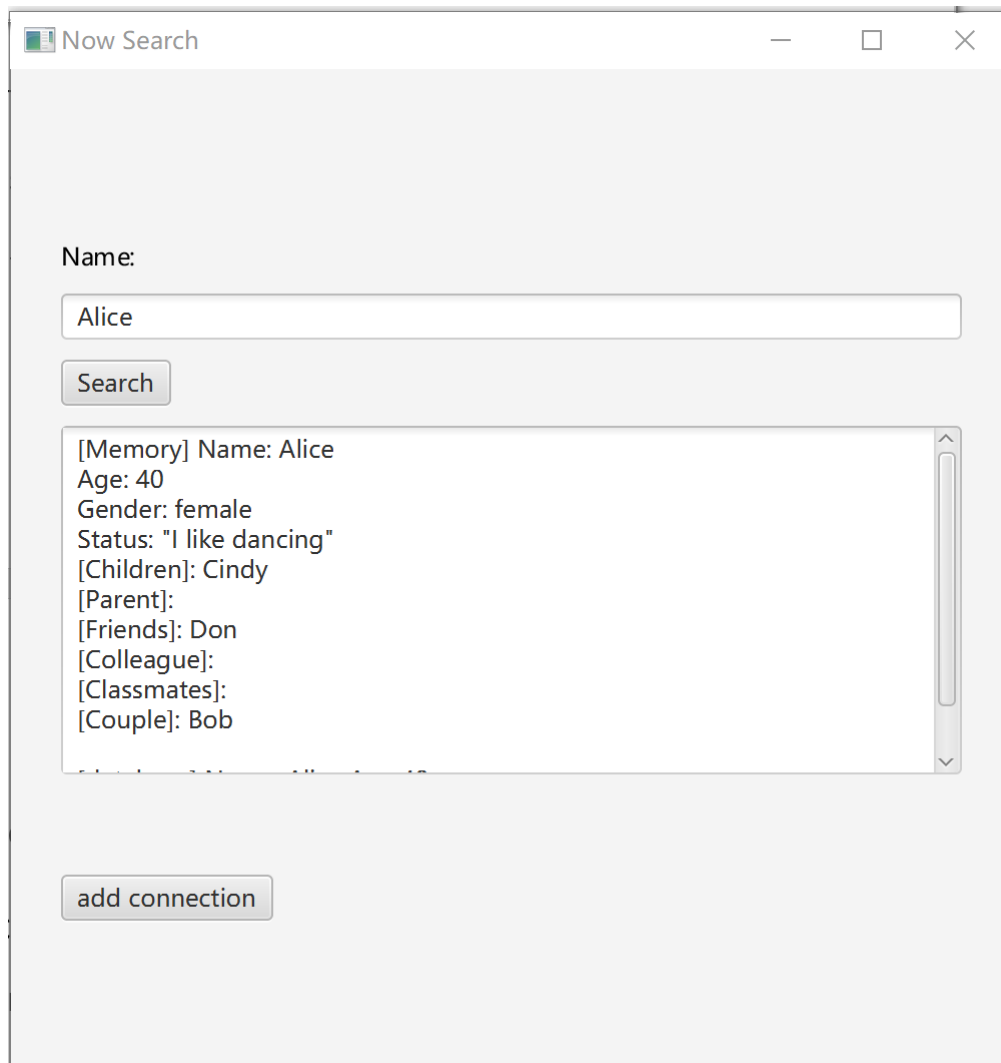

The forth area shows info searched from database.

## 2. Select a person

Click this button

Select a person

Enter the name you want to search, this is the result;

The screenshot shows a window titled "Now Search" with a search interface. It includes a text input field containing "Alice", a "Search" button, and a scrollable list of search results. The results list contains the following text:

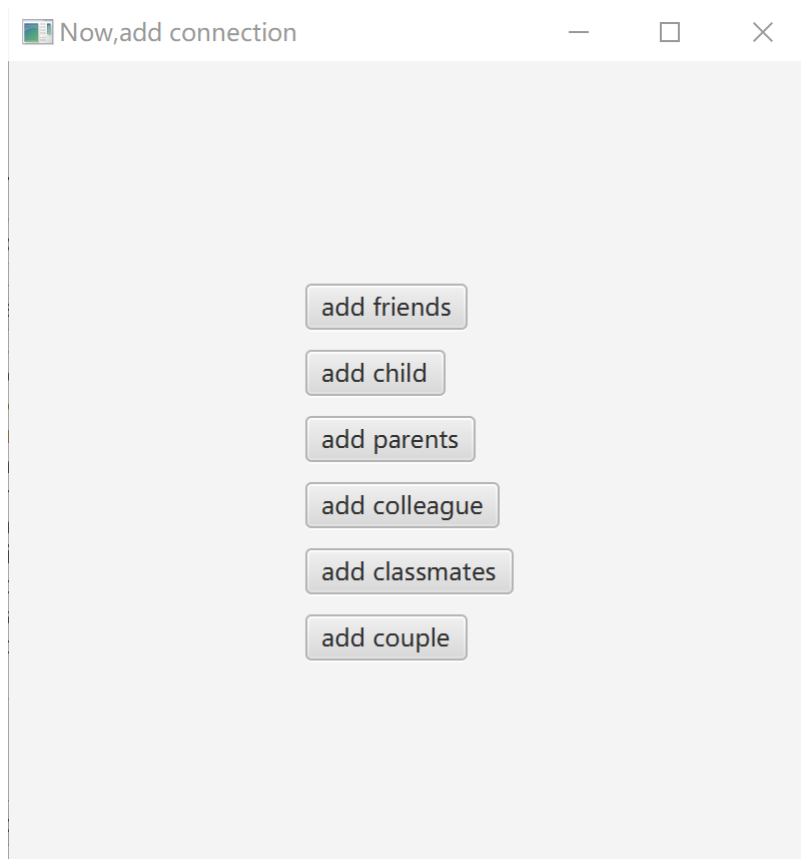

- [Memory] Name: Alice
- Age: 40
- Gender: female
- Status: "I like dancing"
- [Children]: Cindy
- [Parent]:
- [Friends]: Don
- [Colleague]:
- [Classmates]:
- [Couple]: Bob

At the bottom of the window, there is an "add connection" button.

## 3. Add connection

Click "connection" button, a new window will be opened.

Make your choice.

Here is an example as "add friends".

Click "add friends".

A screenshot of a form for adding a friend. It has a light gray background. At the top, the text "your name" is followed by a text input field. Below that, the text "friend's name" is followed by another text input field. At the bottom, there is a button labeled "add".

A new window opened. Fill the name and click "add".

your name

friend's name

add

your name

friend's name

Finished!!

Look, the Button change to “Finished”.

You have finished.

Let's click “search” button to check Alice. Well done.

Name:

Search

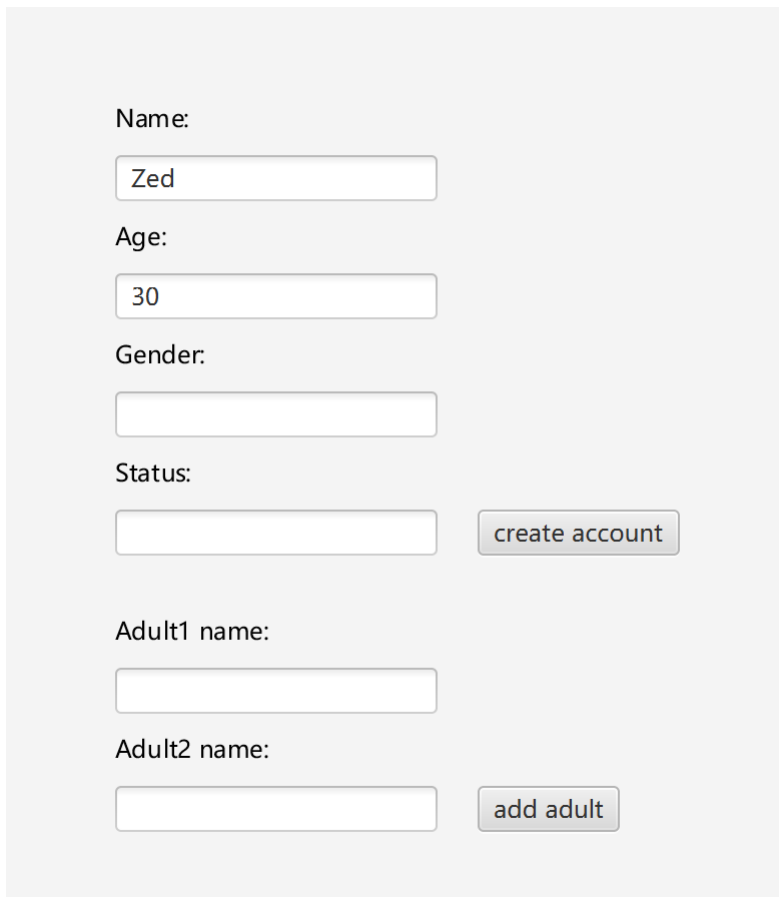

[Memory] Name: Alice  
Age: 40  
Gender: female  
Status: "I like dancing"  
[Children]: Cindy  
[Parent]:  
[Friends]: Don Bob  
[Colleague]:  
[Classmates]:  
[Couple]: Bob

add connection

#### 4. Add a person (account)

Click “add a person into network” on the main page.

After that, a new window opened.

Name:

Age:

Gender:

Status:

Adult1 name:

Adult2 name:

Fill the text bar, gender, status can be empty. And click create account. The system will judge your age, if you are too young, there is a notification, in this case, you have to add two adults.

Name:

Age:

Gender:

Status:

Adult1 name:

Adult2 name:

Carefully

Carefully

your age is under the 16 years old  
your must linked with two adults

确定

And if you enter the name which is invalid, the Error window will be opened.

Name:

Status:

Adult1 name:

Adult2 name:

error

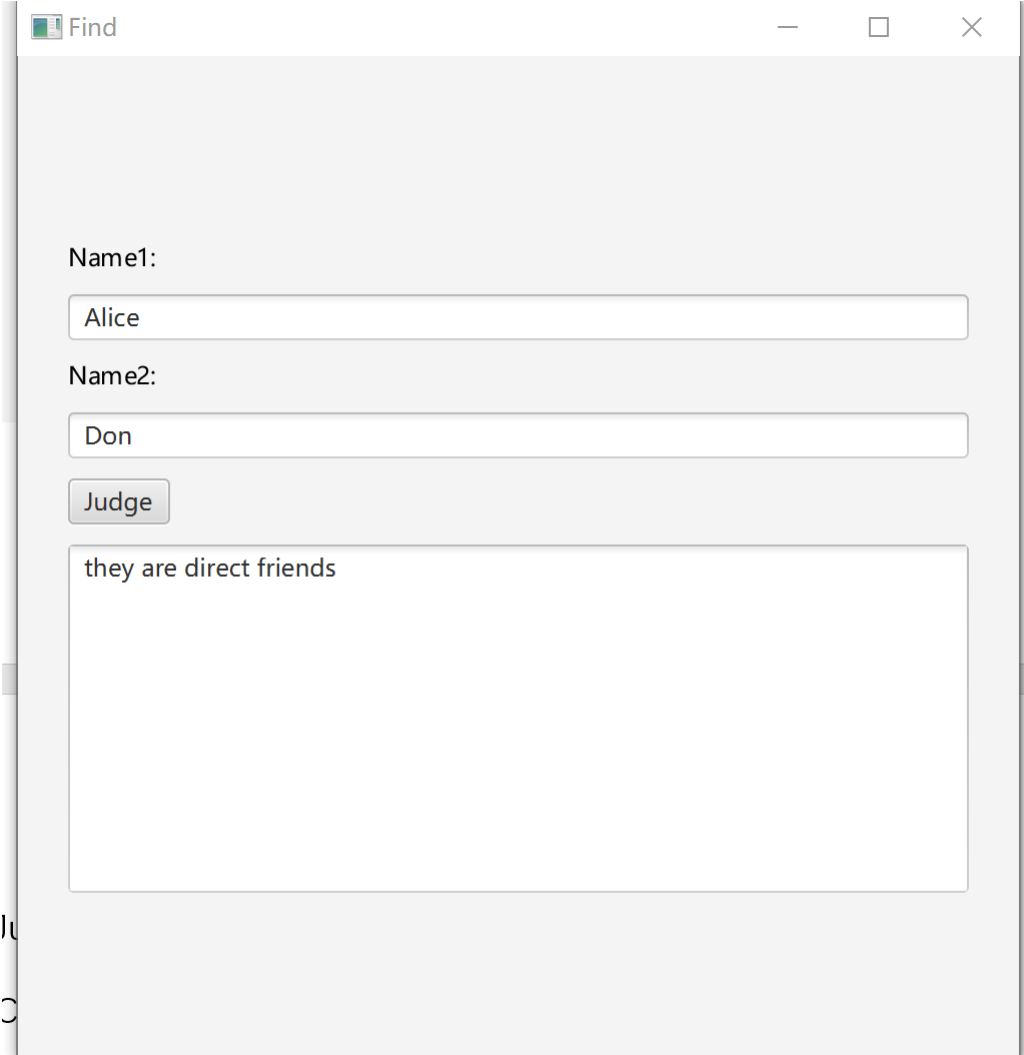

NoSuchAgeException

age need bigger than 0 and smaller than 150!

确定

## 5. Judge friends

Click “Are these two direct friends” from main page.

The screenshot shows a Java Swing window titled "Find". It contains two text input fields. The first field is labeled "Name1:" and contains the text "Alice". The second field is labeled "Name2:" and contains the text "Don". Below these fields is a button labeled "Judge". Below the button is a large text area containing the text "they are direct friends". The window has standard Mac OS X window controls (red, yellow, and green buttons) in the top-left corner.

One more thing, if your operation is invalid or don't meet requirement, the exception will display, sometimes you need reboot this app when the error is serious.

Exception:
